Trans. of Kōbunshi Kagaku (Japan) 1960, v. 17,
no. 184, p. 489-492.

In the previous report, it was estimated that the
reason why the permeability coefficient becomes large
when the film thickness increases is because the con-
centration of the permeating vapor in the film is in-
fluenced by the film thickness; in the present report
this phenomenon is explained by separating the film
into a wet part and a dry part and by deriving a theo-
retical equation. From experiment results such as
measurements of the slackening of the film at the time
of permeation, it was also ascertained that the inter-
